the routledge handbook of comparative political institutions hcpi is designed to serve as a comprehensive reference guide to our accumulated knowledge and the cutting edge of scholarship about political institutions in the comparative context it differs from existing handbooks in that it focuses squarely on institutions but also discusses how they intersect with the study of mass behaviour and explain important outcomes drawing on the perspective of comparative politics the

handbook is organized into three sections the first section consisting of six chapters is organized around broad theoretical and empirical challenges affecting the study of institutions it highlights the major issues that emerge among scholars defining measuring and analyzing institutions the second section includes fifteen chapters each of which handles a different substantive institution of importance in comparative politics this section covers traditional topics such as electoral rules and federalism as well as less conventional but equally important areas including authoritarian institutions labor market institutions and the military each chapter not only provides a summary of our current state of knowledge on the topic but also advances claims that emphasise the research frontier on the topic and that should encourage greater investigation the final section encompassing seven chapters examines the relationship between institutions and a variety of important outcomes such as political violence economic performance and voting behavior the idea is to consider what features of the political sociological and economic world we understand better because of the scholarly attention to institutions featuring contributions from leading researchers in the field from the us uk europe and elsewhere this handbook will be of great interest to all students and scholars of political institutions political behaviour and comparative politics jennifer gandhi is associate professor department of political science emory university rubén ruiz rufo is lecturer in international politics department of political economy king s college london

important parts of development practice especially in key institutions such as the world bank are dominated by economists in contrast development studies is largely based upon multidisciplinary work in which anthropologists human geographers sociologists and others play important roles hence a tension has arisen between the claims made by development economics to be a scientific measurable discipline prone to wide usage of mathematical modelling and the more discursive practice based approach favoured by development studies the aim of this book is to show how the two disciplines have interacted as well as how they differ this is crucial in forming an understanding of development work and to thinking about why policy recommendations can often lead to severe and continuing problems in developing countries this book introduces development economics to those coming from two different but linked perspectives economists and students of development who are not economists in both explaining and critiquing development economics the book is able to suggest the implications of these findings for development studies and more broadly for development policy and its outcomes

discusses new models of economic growth theory focusing on the adoption of technology
